

Department of Industrial & Management Engineering

Feedback on the Interim Report of ARC

1. The department is willing to offer a minor in Management. The course mix of the proposed minor can be structured later.
2. Exit option is very much needed. Perhaps all such students at some point, say after 3rd or 4th semester can be put through a separate channel for two more semesters and then given a BSc or such like degree.
3. Honours Degree- This can be introduced. All students can be initially admitted to the Honours degree, and if a student performs below a certain level (CPI) in the core courses, the student must be transferred to the General programme. Alternatively, all students can be initially admitted to the General Programme. In this case, students performing above a certain level can be transferred to the Honours programmes of the respective departments. However, the graduating requirements for the honours students should be more stringent than for the general programme students.
4. Only one mid sem exam should be there.
